

Why switch to gas central heating?

A quick look at the benefits of switching from electric storage heaters to a gas central heating.

Switching from electric storage heaters to a gas central heating system may seem like a big job, but it can be surprisingly quick and simple.

Gas central heating has lots of benefits, including:

- At the flick of a switch, you can have your gas heating on whenever you want, at the temperature you want. Electric storage heaters have to be timed and planned, and only give off heat for a certain length of time.
- Gas radiators are smaller and less intrusive, so you'll get a bit more space in your rooms.
- Some people find that gas heating saves them money. This is because you can have the heating on when you want it, and it is easy to turn off if you don't.

Don't just take our word for it.

Here's what residents who have switched thought of their new gas central heating.

"Everything went really smoothly and there was no mess left in the house."

"Our bills have definitely been cheaper."

"With storage heaters we would often have no heat left for the evenings and the house would get really cold. Now we have heat whenever we want it."

Speak to our team for more information about switching from electric storage heaters to gas central heating.
